Introduction

God brings us into the world to fulfill a purpose. Before birth God selects some to be prodigies with a specialty talent that has a direct connection to divine intelligence. This is God's way of transferring knowledge to man. When someone discovers an element of God's creation such as radio waves, it is God who chose the person to reveal the concept to. When that knowledge is recorded the rest of us has access to it. Man does not create intelligence; it is passed down to man by God. We can seek God's plan for our life or we can do what we feel like doing hoping for the best. God is interactive in everyone's life - believer, indifferent, or atheist. He created us and will guide us if we let Him.

As I write this, I am 87 years old and now understand God's purpose for my life. In hindsight it is easy to understand why God led me in the direction He did. This article is in a two-person dialog, God and me. God explaining the reasons for the actions He took and my experience at the time.

Most of us do not know why God brought us into this world, but it is up to us to discover what it is and find ways to fulfill it. There are many barriers to overcome. God will inspire and lead us in His direction when we have freedom to listen to our gut feelings.

God: *Before Bob's birth I assigned him the task of discovering how the Polynesian people were motivated to populate the Pacific Islands 1,800 years-ago. I implanted mechanical and self-education skills because his education opportunity will not offer the type of training needed for this assignment. Implanted talents make it easy to learn related skills because there is direct connection to divine intelligence. To deal with Bob's coming social conflicts, I implanted strong willed independent personality. The assignment required that Bob use his own earned money, not a grant. This requires a skill that pays well, that I will lead him to the machinist trade at the age of 19. Bob will be 60-years old when he develops the academic skills the social system says he should have as a teenager.*

My early years

Bob: My formal education years were a disaster; the system is based on academics and I had very strong mechanical talent. Not adapting to the formal education, I was almost in constant combat with my parents and the education system. School counselors were trying to understand why I couldn't learn.

At the age of 14 I joined the Sea Scouts, a division of the Boy Scouts of America. For the first time in my life, I was turned-on and wanted to learn all I could about the sea. I read books on how the Polynesians, 1,800 years ago, populated the Pacific Islands in dugout canoes from Hawaii to New Zealand to Easter Island. I then developed ideas of duplicating their voyages to learn how they did it.

During my teen years we were being drafted for the war in Korea. I joined the Marine Corps and after combat training I was sent to Japan. In Japan an officer said to me “you are a machinist, and you are in charge of the machine shop.” I never saw a machine shop before, but this was a challenge. In the shop was a small manual entitled, “How to Run a Lathe.” I was surprised how easy it was for me to follow directions and complete an assignment. I was turned -on and wanted to learn all I could about the machinist trade.

God: *When I assign a mission to someone, they have a direct connection to divine intelligence, but additional training is still required. Failure is one form of training until skills are acquired. I orchestrate needed opportunity, knowledge, skills, money, connections. I inspire visionary concepts as needed. Bob went to Japan on a troop ship with 4,000 other Marines. I orchestrated his assignment to the machine shop.*

Bob: Discharged from the Marine Corps, I pursued the machinist trade. I applied for an apprenticeship program and was given a test based on academics. I failed badly. I pursued the trade with small machine shops that paid low wages and job hopped my way up the ladder as I gained experience.

During my early 20s I mismanaged money by maxing out credit cards. I soon owed more money at the end of each month than my income. After paying creditors, I had nothing for myself. A voice inside me said, “Living from payday to payday is not the lifestyle I have planned for you. You should be exploring the jungles of South America and sailing the Pacific Ocean in small boats.” I found another job at higher pay and lots of overtime. Soon my debts were paid with enough left over for a one-way ticket to Hawaii.

God: *People who do not learn to manage their money have limited opportunity because their creditors control their life, also, whatever they have is never enough. (The same is true for drug users.) It is very difficult to work with people who let destructive habits control their life. When people have freedom to think, I can inspire and motivate them.*

Bob: In Hawaii I learned more on how Polynesians populated the Pacific Islands. I was motivated to learn all I could about their history. Their oral history tells how their gods guided them to their destinations. In today’s humanist climate, Polynesians belief in their gods was only wishful thinking. It was man’s skills alone that resulted in their success, according to historians. I researched many theories about their boats and navigation methods which made no logic to me. I bought a sextant and self-taught celestial navigation.

God: *I gave Bob the assignment to sail the Pacific Ocean in dugout canoes to learn how I guided Polynesian people, thousands of years ago, to far flung islands of the Pacific Ocean. In time, Bob will discover how I am interactive in everyone’s life and will guide them when allowed to.*

Bob: I was in Hawaii less than a year when reading in the newspaper how a 36-foot sailboat returned to Hawaii because of a broken mast. “Maybe the owner needs a new crew,” I reasoned. I looked him up and was signed on as a crew member. Two others signed on plus a Canadian girl named Joyce. Joyce was 20-years old and on her last leg of a two-year trip around the world. During the 30-day voyage to Los Angeles, she told of her adventures traveling around the world by bus. I was fascinated and fell in love with her.

God: *I orchestrated this opportunity for Bob for the ocean voyaging experience he needed for assignments to follow. I brought Joyce into his life for inspiration and motivation only, not marriage. He is going to have a lot of difficult days ahead and will need more presentence than simple willpower. Joyce and her stories will be his motivator.*

Bob: In Los Angeles I ask Joyce to travel with me, but she went back to Canada, and I headed south to Panama by bus. In Panama I was almost out of money. The choice was to get a job here or fly to Miami and find a job. At the Panama Canal employment office, I inquired about a machinist job. The manager said, "There are no openings." Next door to the employment office was Panama Canal personal office. I was standing in front wondering what I was going to do. Mr. Peterson came by and asked if he could help me. I said, "I am a machinist and there are no job openings." He told me to come into his office. He got on the phone and when he hung up, he said, "You have an interview this afternoon at Pedro Miguel Locks with Mr. Henchy." After a long talk he said, "You will start in two weeks. You need to go back to personal and fill out an application form. We will hire you as temporary for 90 days; if you are a machinist, we will make you perment." (I retired from the Panama Canal Company 25-years later.)

God: *The assignment I gave Bob requires a lot of money and the Panama Canal Company pays well above average wages. He also needs 40-foot dugout canoes and Panama has standing trees this size, the Choco Indians in the Darien Jungle have skills to carve large canoes from a single tree.*

Bob: On the job I discovered my coworkers were employed for the same reason I was. They had big dreams of jungle or sea adventures and ran out of money. Like myself, they were motivated. I never worked with motivated people before.

Amazon River

When traveling through Central America my goal was to travel down the Amazon River. In Panama all my jungle and sea adventure dreams became a real possibility. Working with coworkers seeking to fulfill their

dream was highly motivating. One of the company perks was two months paid vacation every year. Nine months on the job I had earned six weeks paid vacation. I flew to Peru to start my Amazon River adventure.

On the river I met three other travelers. In Benjamin Constante, Brazil, Joe Brooks said he is going to build a raft and drift down river. I first resisted when an inner voice said, "This is why you are on the Amazon River." One week on the raft and 200 miles downriver we were out of food in the middle of a mile wide river. The current kept us in the middle. I had less than a week of vacation time left. We hailed a passing boat and abandoned the raft. The next day we arrived at a very small village, Porto Afonsos. A sea plan stopes twice a week. The plane stopped that day but was full. Friday the plane stopped and a seat was available. I flew to Leticia, Columbia. Saturday, I got a flight to Bogota on a cargo plane. Sunday, I got a flight to Panama City, Panama. Monday, I was back at work on the Panama Canal.

The Amazon River Raft

God: *Bob has always wondered if I orchestrated his escape off the river and back to Panama or was it luck. He will never know. He does know this raft trip was my plan because I had to coach him into doing it.*

Bob: I told of my dream of sailing the Pacific Ocean in a dugout canoe. At the Panama Plywood Company the foreman told me where and how to acquire this type of dugout.

I took a banana boat for an overnight trip to the Panama/Columbia boarder to meet a German named Augusto Adrien. He lives in a one room cabin on the edge of the jungle with his two sons. I was dropped off where Augusto was sitting on a large bolder reading today's Panama City newspaper. As I came ashore, he was the friendliest person I ever meet. I asked him how he got todays paper because I was on the boat all night. He said a plane flies over and drops it. I told him of wanting two 40-foot dugout canoes. Six months later they were delivered to Panama City. Then shipped by rail to the ship.

With two huge canoes delivered, I was not sure how to proceed, I had the feeling I was in over my head. I went to the French Line office to enquire about shipping them to Tahiti with passage. The agent said a ship is already on its way here but could not give a price. He radioed the ship and the captain said he has room for the hulls and space for a passenger but wants to inspect the cargo first. There is a problem, the ship will only be in port for only a few hours.

Decisions?

I now had the best job in my life with the highest pay I would ever find. Wages were double from my last job plus two months paid vacation every year starting from day one. To carry out the Liki Tiki project I had to resign from my job and do it before the ship arrives. I may never find opportunity like this again, I will not know if the captain would allow the hulls on his ship, and I will did know what it would cost. Going to Tahiti, I was entering an unknown future. Staying with the Panama Canal Company I know I will have a secure future. This is where Joyce's relationship influence me. She took the risk of traveling around the world by herself; if she had courage to do that, I should have courage and take the risk of giving up a dream job.

God: *This is where My inspired projects have divine support. I orchestrated events that gave Bob the courage to take risk. The experiences he has will give him the persistence he need to finish the project.*

Bob: On the day of departure, my bridges back into Panama are burned and I had no choice anymore. I had the hulls moved by

the ship and then went to the French Line office. I told the agent the hulls are by the ship and asked what is it going to cost. The agent said, "Have a seat, I will be back." An hour later he came back and said, "First class passage is \$350. and shipment for the hulls is \$100." I was expecting to pay a thousand dollars. I was now on my way to Tahiti to build "Liki Tiki" in a land where I have never been.

In Tahiti, the dugouts were offloaded onto a road. I went to the customs office for permission to move them. The agent said, "You cannot offload them, you need permission before you can bring them here." I said, "They are now sitting on the road and I need to move them." He would not give permission and I have yet to find a construction site anyhow.

I rented a motorbike to circle the island looking for a construction site. On the west side of the island, I found a possible location in a coconut grove that bordered on a shallow reef, 6-inches deep at high tide. I walked to a nearby house and the owner was on the porch. I told him what I wanted to do and asked if I could use his land. He said, "Yes, we are going to build a resort hotel but that is not for a while."

Back at the customs office another agent was on duty and I told him what I want to do and need permission to move the hulls. He was interested in the project and cleared the hulls. I hired a truck and soon the hulls were at the construction site.

My plan was to find help to build and sail Liki Tiki to Hawaii. Word spread that this was an unrealistic project and no one was interested. In fact, I was stopped on the street by strangers telling me how nutty this project was.

Several months later a voice inside me said, "You are not going to Hawaii in this boat but you will in another." I asked, "will you let me finish the boat?" The inter voice said "Yes." I moved to another location in my work camp trying to get away from the inter voice and plan a counter move, thinking the inter voice would not following me. My plan was to finish the boat and sneak through the reef. Once at sea no one can stop me!

After this encounter, progress was very slow and cost went up. The motivation was not there like before. It seemed God was no longer supporting the project.

My reasoning between God inspired projects and self-motivated projects:

- When God inspires us to carryout a project, progress is fast and cost is down. (God's support)
- God was my liaison support group, preparing needed services before I got there. Without His support I would have needed to hire liaison people. This takes big money and creating an organization.
- When we pursue a project of our choosing, progress is slow and cost is high. (We are on our own)

I tried to escape from God

What really happened during my three days at sea.

November 2021 I decided to tell of my hard-to-believe experience. One of my goals was to discover how the Polynesians discovered far flung islands. Results: God inspired leaders to explore the Pacific and He would guide and supply water and food. God is interactive in everyone's life no matter what our belief is. Today's prosperity is the result of God's inspiration and guidance; not man, money, or political policies.

While building the *Liki Tiki* I had orders from the French government not to leave Tahiti in the boat. If I tried I would be deported. My construction camp was on the west side of the island and there was an outlet through the reef nearby. When completed I would sail anyhow. Getting through the reef was a problem, I asked a passing boater to tow me out.

The trade winds were strong and I was soon out of sight of land. I had no compass, charts, or navigation tools. The trade wind was my compass because it blows from east to west 95% of the time. My goal was to understand how people traveled between islands without these tools. For the next 24 hours I was making good time getting away from Tahiti as fast as possible, so as not to be picked up by the French Coast Guard.

Sometime during the second day the sky became overcast so I had no direction by the sun. Trusting the trade winds I used them as my compass. Unknown to me, when the sky became overcast and the trade winds reversed. During the second night I assumed I was still going west, but I was sailing back to Tahiti. At sunrise I saw the lights of Tahiti and the wind was still blowing from the west. Realizing my experiment was not going to work I continued on. About noon I was sailing north along the reef looking for the entrance through the reef. The breakers that were just a short distance from the *Liki Tiki* turned to deep water and I turned in. I was inside the reef and in five minutes I would be on the beach. Before I could reach the beach the trade winds came back and *Liki Tiki* became hung up on a coral head inside the reef. I signal for a fisherman to come over and he took me ashore.

I was highly discouraged walking along the road when a French lady stopped her car and told me to get in. She said "It was my husband that towed you through the reef and has not been able to sleep for the last three days. He told me this morning that you would be back today." To this day I have never met him and wondered why he should have given it a second thought. The events during those three days made me realized there are forces beyond our control guiding us. I have come to believe these forces can change the weather, if need to, to achieve an outcome. I also realized that the popular theory of Polynesian voyaging canoes and navigation methods has major flaws. The two 40-foot one ton dugout canoes worked against each other and their lashings would soon break up.

People 1,800 years ago had big dreams of achievement just as we do today. Being motivated and seeking guidance was the same then as it is now. With new ideas there are always unknowns and dealing with the them is a talent. People that continually make the right decisions with unknown elements become leaders. This is true with Polynesian navigators 1,800 year ago or business leaders today; they depend on intuitive guidance for decisions. In any new adventure there are always unknowns and leaders decisions are based on inspired feelings, not chance or luck.

Back to Panama

Bob: Two years after leaving Panama I was in Hawaii and out of money. I wrote a letter asking for my Panama Canal job back. They sent me a plane ticket from Hawaii to Panama. I was back at my old job as nothing had ever happened. The company was needing hardhat divers and asked for applicants. Not being back very long my supervisor asked me to apply; I was accepted. The training was for six weeks at company expense. In addition, I was paid dive time while attending the school. On the job my wages were greatly increased.

Back in the jungles of Panama I was inquiring about another large dugout canoe that I can put outriggers on. Three years later Augusto Adrian told me the Choco Indians would build one as requested. In exchange they wanted an outboard motor that was available in Panama City and they wanted it before starting the canoe. I gave Augusto the money and said I want to take photos while under construction.

The Indian village was 170-miles from Panama City down the coast toward Columbia. The only way to get there is by boat. I had a small dugout with a 20-HP outboard. I mounted a 55-gallon oil drum in the middle and motored down the coast to Augusto's house. The construction site was further down the coast. The next day Augusto assigned me Pedro to show me where the Indian village was. I was put ashore and Pedro was to anchor in deep water and swim ashore. One problem! Pedro did not know how to swim. I was not paying attention to what he was doing and he soon waded ashore. A large wave came and rolled my boat upside down, grinding the outboard into the sand. At that time, a dugout with Indians motored by and saw what was happening, came ashore and got it floating again. The motor on this boat

Liki Tiki Too under construction.

A 30-foot dugout canoe I traveled 170-miles down the coast of Panama towards Columbia to inspect Liki Tiki Too under construction.

is the one I bought for these Indians for the construction of a much larger canoe.

I got pictures of Liki Tiki Too under construction. The control arm on the outboard was broken and did get back to Augusto's house. I needed repairs for the 170-miles back to Panama City. Just before dark a sailboat dropped anchor across the harbor about a mile away. I told Padro we will see if he can help us in the morning.

Back at the Panama Canal there was one coworker I did not want to work with, I avoided Tom whenever possible. For some reason I had several Indians in my canoe as I motored up to the sailboat. I could not believe it, sitting on deck was Tom. This harbor is in the middle nowhere and I wondered what he was doing here and Tom wanted to know what I was doing here. I told him I needed repairs so as to get back home. He said he has an electric drill motor and repair parts. He helped me fix the motor. Back on the job we were the best of friends.

God: *I orchestrated this problem and orchestrated the recovery. It is a reminder that there is a greater power looking out for my creation.*

Liki Tiki Too crossing the Pacific Ocean

Easter Island Discovery by Polynesians

Easter Island is one of the most isolated islands on earth, over 1,000 miles from nearest land and 2,500 miles from Tahiti. Polynesians populated the island almost 2,000 years ago in large dugout canoes. How did they do it? With strong belief and trust in their gods. They had a highly developed understanding of intuitive guidance, God's method of communicating with us. Intuitive guidance is universal from the beginning of time.

Tahiti is the center of the Polynesian universe and the original Polynesians had a passion for exploration. Leaders had visions of great achievements. They had no information about the physical world and no written language. This left many unknowns, for this reason they had to depend heavily on their gods for inspiration and guidance. It is this dependence that gave them courage and confidence to search for and find other islands. The small size of their boats limited supplies that left no room for error, which is, missing an island on the first try.

Explorations like this were led by leaders that had a strong connection with intuitive guidance. For them to embark on voyages they had to have a reason such as finding heaven (paradise) in the east where the sun comes up. Polynesians were confident that they would be guided to undiscovered islands. Without this belief they would have never ventured out.

Tahiti is in a strong trade wind belt where winds blow from the east most of the time. It is impossible for dugout canoes to sail against these winds over long distances. 700 miles to the south are variables, which means, the winds blow from any direction. At these latitudes sailing east is possible. On the first voyage navigators had no knowledge of where favorable winds were or where Easter Island was or if there was an island or how long the voyage would be. The only way for them to succeed was dependency on intuitive guidance.

The discovery of Easter Island had to be supported and success orchestrated by the divine universe. The island is one of the most isolated is in the world which makes it impossible to find by accident, especially by people in dugout canoes. It is likely that the expedition originated in Tahiti. They leave in March during the rainy season. With limited storage containers they rely on frequent rains for fresh water. For food they rely on the sea. Open dugout canoes do not have much room for storage.

Once under way the navigator is guided by gut feelings (intuitive guidance) that I call “comfort zone navigation.” When going the wrong way, the navigator becomes extremely uncomfortable for no logical reason. When on track, he is relaxed. (This is based on my experience with the *Liki Tiki Too.*)

It does not matter if we believe in God or not, His guidance is there. It is our decision to accept or reject it. Knowing that God is supporting us is highly motivating.

Notes of interest:

Intuitive guidance is a lost art in our society today. Successful people seem to have strong instincts because they make frequent right decisions. Some are considered have a destiny. Destiny means events are orchestrated in the divine universe. If someone is doing something that doesn't seem logical, but is succeeding; destiny may be supporting them knowingly or not.

Some think of success as luck. Luck or chance is a onetime event. Achievement is built on multiple events where each event leads to the next one. Each event needs information for decisions and sometimes it is not available; intuitive guidance may lead to desirable results. A quality decision depends on our ability to separate intuitive guidance from personal opinions.

Today we place heavy reliance on technology that overrides intuitive guidance. But, in a crisis we ask God for help. Unrequested help is also there in situations we consider "a coincidence."

The song *Bali ha'I* from the movie "South Pacific" is about searching for our paradise island. Also in the movie is the song *Happy Talk*. This is about having a dream. It says "If you don't have a dream, how are you going to have a dream come true?" People 2,000 years ago had the same dreams of finding paradise as we do today.

In 1970 I crossed the Pacific Ocean, 5,000 miles, in a dugout canoe. My goal was to understand how the Polynesian people populated the Pacific Ocean almost 2,000 years ago. It took several years of trial and failures before I got it right. I had many experiences that I considered coincidences at the time, but since then I realized the failures were orchestrated events to teach me the skills needed to succeed.

God, Instincts, and Leadership

Discovery: The act or process of sighting or learning the existence of something for the first time.

Discoveries start with God inspiring someone about a possibility. This becomes a God inspired goal. As research and skills advance, the search becomes a passion. Opportunity seems to come out of nowhere with instincts requiring us to decide to accept or reject. To pursue a task with an unknown outcome is leadership. When accepting God's calling, we have access to visionary intelligence, intuitive guidance, orchestrated events, and more. God is interactive with everyone, believer, indifferent, and atheist, He is not prejudice, man is. With today's technology God's interaction is seldom recognized.

People who populated the Pacific Islands 2,000-years ago was a seafaring society with experience with divine guidance and leadership. When it was suggest sailing to a distant unknown island, the concept was approved by all involved. On decisions like this the social group had instincts if this was a God inspired project or not. They understood they needed divine guidance and depended on it for decision making.

In 1519 Ferdinand Magellan sailed from Spain with five ships with the goal to sail around the world. A project like this had to be inspired by God for it to succeed, it needs His support. Leaders had strong faith that God would interact and guide them through the unknown. In the western Pacific there is a maze of islands. The only way to find a route through them is by leader's instincts. One ship made it to Spain.

If there was no God to inspire and guide us, we would be nothing but food gathers like all wildlife with no interest other that finding food and sex.

In 1772 Captain James Cook was assigned to explore the Pacific Ocean with HMS Endeavour. He was chosen because of his intuitive, instinct, and leadership skills, skills needed to explore the Pacific Islands without the ship going aground. At night, islands and atolls cannot be seen, this is where strong instincts and leadership skills make the leader. If the ship went aground the crew would never get back to England and what happened would never be known.

In 1989 my wife, Joan and I were sailing our 50-foot ketch from Bermuda to the Virgin Islands. It was three o'clock in the morning and Hunky-Dory was sailing at a fast clip with a following wind when, in the distance, we saw lights from the islands. To the left were lights and to the right were lights. There was a dark space, that I considered to be a gap, between the islands. Joan hollered, "Shut it down!" I turned Hunky-Dory into the wind to wait for daylight to see where we were. As the sun came up the dark space was the backside of an island with no lights and a rocky shoreline. If we kept going our boat would have piled up on the rocks. God is interactive in everyone's life and will protect us from danger or lead us to success when He can. He has been doing this from the creation of man.

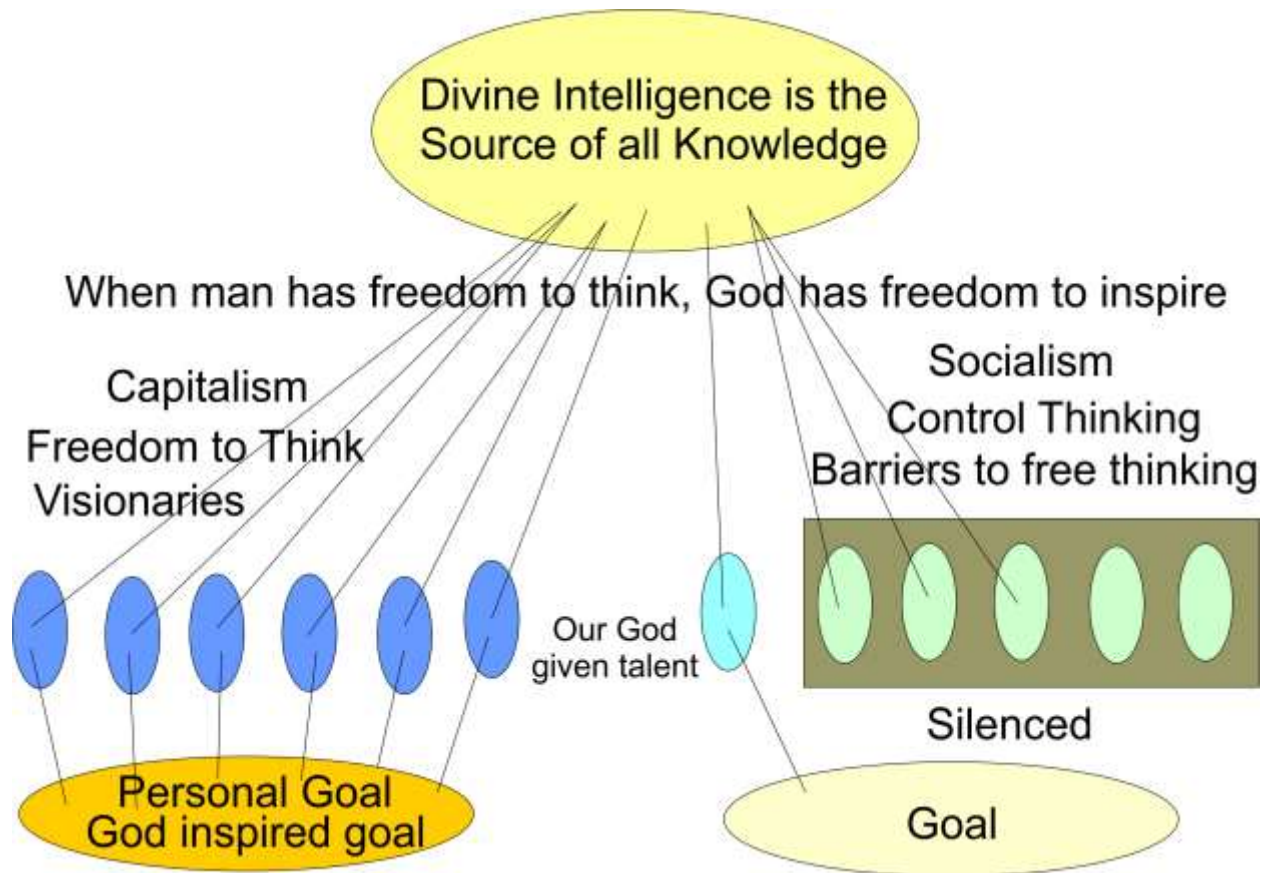

In 1889 God revealed the existents of radio waves to Mr. Tesla. Inspired by divine intelligence is the only way to become aware of an energy force created by God.

In 1901 God revealed to Guglielmo Marconi how to use radio waves for communication. The rest is history.

Today as always God is the source of visionary concepts, not man, money, or political policies.

When man has the freedom to think, God has the freedom to inspire.

God's Plan for Our Nation

God is the creator of all things; He is the source of man’s creative intelligence. God did not create man with the ability to be creative, man’s creative skills are inspired by God.

God created divine intelligence that penetrates to all four corners of the universe, just like gravity. We can’t see gravity, but we can see its effects. We can’t see divine intelligence, but we can see its effects. The difference is we tend to give credit to a man’s intelligence assuming it originated with him. **Access to divine visionary intelligence is via gut feelings, that is, instincts, intuitive inspiration, intuitive guidance, and intelligence orchestrating opportunity.** Having a goal that motivates can keep us focused on the lifestyle we want to live. This allows God to inspire ideas, possibilities, and opportunity.

God communicates with everyone, believer, and atheist, He is not prejudice and works with anyone who has freedom to think for themselves. Before our birth, God implants a talent and sometimes a mission for us to carry out. After birth we must discovered and developed it. When related education and opportunity is offered, wisdom will explode. God inspired the technology we enjoy today through someone; consider the cellphone. The cellphone is based on radio waves that have no physical properties. In 1889 it was Mr. Tesla who became aware of them. It was 1900 when Mr. Marconi discovered how to use if for communication. God transfers knowledge to man in His time. We can only discover elements in God’s creation, not invent it.

Prodigies

When we witness highly skilled talent by someone with little or no training, especially very young, we say “they have a gift.” That gift was planted in that person before birth. The word “womb” is in the Bible 63 times associated with promises. For example, Deuteronomy 28:11 “The Lord will grant you abundant prosperity—in the fruit of your womb.” The Bible has many references to leaders chosen while still in the womb.

God chose Moses to lead His people out of Egypt before he was born. For Moses to acquire needed skills, God orchestrated events where he had opportunity. He was raised in Pharaoh’s house where he learned leadership skills and acquired political connections. Family conflicts sent Moses to Sinai for 40-years where he learned about life in the desert. Training completed, it was time to fulfill God’s assignment to lead His people out of Egypt.

All through history it was prodigies who transferred knowledge from divine intelligence to man. God assigned a mission, purpose, and then supported it when carried out. Very often prodigy personalities are strong-willed, highly independent, visionary thinkers, stubborn, intelligent to name some characteristics. This personality is a threat to leaders in socialistic societies because they cannot be control. Many are silenced by government regulations, social circles, family, and many other barriers. Leaders control over man’s thoughts limits God’s ability to inspire new concepts. Freedom to think is why capitalist societies create wealth.

Political leadership

All through history monarch style of government was the norm where one man made all the decisions. Most of these leaders wanted power, control and were greedy, they implemented controls to prevent independent thinkers from challenging their authority. Taxes and wars enhanced their power. This resulted in two classes of people, upper and lower. The upper class controlled how people think and live. There was no jumping from lower class to upper, social policies kept it that way. Very often the government created a state religion, its policies, and passed laws to prevent criticism.

For example, during the 1600s the common belief was that heavenly bodies rotated around the earth, the earth was the center of the universe. Galileo, an astronomer, physicist, and engineer proved that the earth rotates causing the heavenly body to rise and fall every day. This was unacceptable to authorities, Galileo was tried by the Inquisition, found guilty of heresy, and forced to recant. He spent the rest of his life under house arrest. Not allowing freedom of ideas, God had limits communicating concepts to man.

When the first Europeans came to America, they did not want a monarch government, they wanted a government that seeks God’s guidance based on the Bible. Communication with God was the goal and God rewarded America. If God was searching for a land where He could communicate with people and lead them to prosperity, America was it.

Early settlers to the new world came with two different goals, wealth and freedom of religion. Gold seekers went to South America and freedom seekers went to North America. In my opinion, it is with freedom seekers that God planted seeds of a government that would allow people to think for themselves. This requires that God be recognize as supreme, then He is able to inspire man with concepts never dreamed of before. Americas founding fathers wrote the Declaration of Independence, US Constitution, and Bill of Rights. These documents were inspired by God that created a nation we enjoy today.

God Inspired the Capitalist form of Government

The following men were prodigies chosen by God before birth to lead the new nation into prosperity. Some were believers and some atheist, God is not prejudice, man is. Prodigies have a direct connection to divine intelligence based on their God given talent.

Men who wrote the US Constitution, and Bill of Rights., 18th and 19th century

September 17, 1787, at the Constitutional Convention there were about 250 people and most had strong belief in God. The primary writers of the Constitution recognized there is a God that created the universe but some had limited interest in religion or elements of the Bible. It seems God chose them because they understood how God inspires men with divine intelligence. He may have also chosen them because the government must represent a wide range of cultures, experiences, and opinions. Worship centers can finetune differences. Benjamin Franklin had no interest in religion or God but recognized that God was dominant over the universe and that He should be consulted for guidance. Mr. Franklin gave a speech explaining his concerns at the Constitutional Convention that sounded like a Sunday morning sermon.

James Madison 1751-1836

“The religion, then, of every man must be left to the conviction and conscience of every man: and that it is the right of every man to exercise it as these may dictate.”

“Belief in a God All Powerful wise and good is so essential to the moral order of the World and to the happiness of man, that arguments which enforce it cannot be drawn from too many sources.”

Thomas Jefferson 1743-1826

“The Christian religion is a religion of all others the most friendly to liberty, science, and the freest expansion of human mind.”

“**We hold these truths to be self-evident**, that all men are created equal, that they are endowed, by their Creator, with certain unalienable Rights, that among these are Life, Liberty, and the pursuit of Happiness.”

Thomas Paine 1737-1809

“All the principles of science are of divine origin. Men cannot make, or invent, or contrive principles. He can only discover them. “

“There is no principle of science that is not of natural origin, man can only discover what God has put in nature.”

Author of “Age of reason”

John Locke 1632-1704

“Every human has the right to life, liberty and the pursuit of happiness.”

Locke’s life and beliefs are the most influential factor because his beliefs and philosophies are engrained in the Constitution.

Author of “Second Treatise of Government.”

“It is Locke whose ideas are embodied in the United States Constitution, the British constitution (as well as the constitutions of its former colonies throughout the globe), And even for a brief period the French constitution” (Strathern, 1999, p.34). Although the framers of the United

States Constitution had many influences, John Locke's life and beliefs are the most influential factor because his beliefs and philosophies are engrained in the Constitution."

In my opinion, it was this convention when God planted the seeds of capitalism, a government that would give people freedom to think for themselves. Man's freedom gave God the freedom to inspire man with concepts never dreamed of before. America's founding fathers wrote the Declaration of Independence, US Constitution, and Bill of Rights. These documents were inspired by God that created a nation we enjoy today. With the foundation of government established, the country was now ready for prosperity.

For the first time in history there was a law that gave man freedom to think, believe, and develop concepts under a government that protected individual concepts. In 1765 James Watt developed the steam engine that helped man do work beyond anyone's imagination. This was the beginning of the industrial age inspired by God. The technology age has started and the world was never the same after that.

Men who built America, 19th and 20st century

Early in the industrial revolution leadership and efficiency was not understood, profits were the goal. Greed and abusive leadership were left over from the monarch days and was highly inefficient. Henry Ford changed that by increasing efficiency with the development of the assembly line. He doubled the wages and cut the workday to 8 hours with weekends off. Efficiency was so great he drastically cut the price of cars that allowed his employees to be customers. This created a middle class and became the lifestyle we enjoy today.

The five men below were a group of prodigies; each assigned a goal by God who guided them to create industrial America that produce opportunity and prosperity beyond belief. God orchestrated this prosperity because of man's freedom to think and American political leaders' goal to serve the people.

- **Cornelius Vanderbilt...** built his wealth in railroads and shipping.
- **Andrew Carnegie...** expansion of the American steel industry in the late 19th century and became one of the richest Americans in history.
- **Henry Ford...** American industrialist, business magnate, founder of the Ford Motor Company, and chief developer of the assembly line technique of mass production.
- **John D. Rockefeller...** was the founder of the Standard Oil Company.
- **John P. Morgan...** was an American financier and banker who dominated corporate finance on Wall Street.

During the early stages of the industrial revolution, many leaders did not understand leadership and abused employees. Government being a servant of the people, political leaders pass laws to stop this abuse. For capitalism to work there had to be a divide between entrepreneurs and government. Man has a natural desire for power, wealth, and control. Political leaders goal is to support people's needs. With this check and balance the nation prospered.

America's prosperity was noticed by other world leaders but did not understand capitalism and that prosperity was inspired by God. They copied the technology but not the leadership that went with it. This convinced some leaders they could find new ways to implement a

government based on upper class having total control over the lower class. To succeed, God had to be removed from society and replaced with political leaders as a god. During the wars that followed, dictators' power and greed destroyed their country and themselves. The Second World War was a war between capitalism and socialism. 70 million people died during that war, 95% were under socialistic government and 5% under capitalist government. The efficiency of capitalism won the war. God was also the creator of capitalism.

After the wars the technology revolution exploded, and America continued as the leader of an ever-expanding prosperity. Capitalism could adapt to changing trends. God created and trained prodigies to pioneer these new technologies.

Men who were Tech Leaders; 20th and 21st century.

The 21st century ushered in the digital revolution. Visionaries of all social classes found opportunity and wealth in the digital world; a concept never experienced by man before. Under capitalism, society was able to adapt, find new uses, and benefit from it, wealth exploded. The following visionaries ushered in the new frontier.

- **Bill Gates...** founder and executive chairman of Microsoft that influence the world like no one else.
- **Jeff Bezos...** founder and executive chairman of Amazon that pioneered internet shopping.
- **Elon Musk...** He is the founder, CEO, and Chief Engineer at SpaceX, CEO of Tesla, Inc. maker of electric cars and trucks. His goal is to setup a colony on Mars using his own money.
- **Steve Jobs...** He was the chairman, chief executive officer (CEO), and co-founder of Apple Inc. Developer of computer technology.
- **Mark Zuckerberg ...** He is co-founder of the social media website Facebook and its parent company Meta (formerly, Facebook, Inc.)

Elon Musk, CEO of SpaceX is a pre-educated prodigy with the goal of sending man to Mars using his own money. With a team of prodigies with direct connection to divine intelligence, he is able to launch space expeditions at a fraction of what it cost NASA. (National Aeronautics and Space Administration) God has chosen him for the Mars expedition supplying him with knowledge, skills, money, connections, and orchestrated support from others.

President Donald Trump is another pre-educated prodigy with the goal of lifting man's quality of life with opportunity. He is a businessman and understands what it takes to invest in a successful business, he also knows how to get things done. When it comes to opportunity, he is at the right place at the right time. As President he has to fight political leaders who want control.

Chuck Yeager was the first man to travel faster than the speed of sound. He was a pre-educated prodigy at birth followed by self-education during the following years. He finished high school but did not attend college. Chuck was the pioneer of the space program but would not be accepted as an astronaut because of his limited formal education. Prodigies have a direct connection to divine intelligence. If he was accepted as an astronaut, he may have been able to solve many problems saving millions of dollars.

When we recognize that God is the source of knowledge and prosperity, we can achieve more than we ever dreamed possible. Our education system would be organized differently by

recognizing everyone has a different talent and interest. Today, students that are at the top of the class, their talent is in harmony with the education system. Those at the bottom need a different form of education. Learning how to learn with research, self-education, and divine intelligence (knowledge not available in books) work together to expand knowledge for a God given talent. Where there is freedom of opportunity, God can enhance natural talent.

God and Technology

- Man's freedom to think gave God freedom to inspire man with technology concepts.
- God is the source and manager of knowledge.

God created intelligence, then the universe, then life. God interacts with all living things including plants and animals. All forms of life need sunlight, water, divine intelligence, and divine guidance to fulfill the purpose they were created for. Sunlight and intelligence penetrate the universe. For plants and animals, they were programmed to fulfill a predefined need. Some of the program is built-in that needs to be stimulated by divine intelligence while other elements need divine guidance such as migrating wildlife to travel from point "A" to point "B."

God inspires man's creativity

God created man as a free-thinking agent but before birth God implanted a purpose and a talent that is different for everyone, that's makes us different from animals. We call them prodigies because they possess unusual knowledge and skills with direct connection to divine intelligence. God is the creator and source prosperity, not man, money, or political policies. Wisdom and prosperity does not come from our own power, but by the power of God. The source of all wisdom is God who shares it with man when He can. God's support comes in many forms.

- God interacts with knowledge, skills, money, connections, and orchestrated support from others.
- God interacts with us as an individual, our projects, our organization, and as a nation.
- God supports projects when He has the freedom to lead or guide.
- God supports nations whose laws are based on Christian values.

God is an educator, this is what Jesus did while on earth, remove barriers that resulted in a higher quality lifestyle. It seems a quality lifestyle has always been God's plan, but He gave man freewill in thinking and actions. This resulted in leaders desire for power, control, and greed which is a barrier to prosperity.

God is the source of prosperity
NOT man, money, or political policies

Capitalism versus Socialism		
Political style	Capitalists are visionaries that develop ideas that create wealth	Socialist are controllers that copy ideas that create wealth
Leader's goal	Guided by divine intelligence, universal intelligence, recognize that God is the source of prosperity	Seek greed, power, control, limit freedom of knowledge. Political leaders are considered the source of prosperity
God	Recognize there is a God and all man's rights come from Him. God created man.	There is no God, man's loyalty is to the state. Man created god.
Prodigies	Prodigies have a link to divine intelligence. God can communicate with man when there is freedom to inspire ideas	Pressure from family, social circles, and political policies prevent prodigies' talent from being discovered
Supporters	Visionaries, motivated, high ambition	Low ambition, welfare dependent
Independent thinkers, visionaries	God has opportunity to inspire independent thinkers with ideas that create wealth such as Bill Gates, Microsoft, and others. They create opportunity, jobs that enhance society	Social groups silence independent thinkers because they do not support groups' opinions, policies
Opinions	Open debate to share and expand ideas that expand opportunity	No debate, no outside ideas, leaders control how people think
Advancement	Based on man's merits	Based on political connections
Divine support	God supports capitalist and prosperity	Satan destroys prosperity
Opportunity	Capitalism expands opportunity, can adapt to changing technology.	Socialism destroys opportunity. Resist changing technology.
Leadership goals	Politicians base decisions on what is best for voters	Politicians base decisions on what is best for their political party
Equality	There is no such thing as equality, there will always be rich and poor.	Equality sounds compassionate, but there will always be greed.
Measured Results	Leadership, prosperity, quality, skills.	Control, loyalty, political connections.

God is the source of prosperity
NOT man, money, or political policies

Capitalism versus Socialism		
Project size	Under capitalism God can inspire many people that leads to a common goal with big dreams.	Under socialism most are silenced, that limits God's ability to support big dreams.
Courts	Decisions are based on the law.	Decisions are based on political goals.
Dependence	God has the power to inspire a productive lifestyle.	Man has the power to make man dependent on government.
Inspiration	Under capitalism God inspires, service to others, freedom of opinion, freedom of ideas/ debate, education, innovation/ prosperity, visionary concepts, opportunity, peace/hope, possibilities. End result is quality leadership.	Under socialism Satan inspires, hate, fear, distrust/spying, victimhood, barriers to ideas/opinions, no hope, prejudice, power/control, riots/ destruction, crime, social disorder, war. End result is inferior leadership. Those with different opinions from leaders are silenced.
Freedom of ideas	Freedom of speech, freedom of ideas.	Must conform to woke vocabulary and policies, they can't accept any other opinion than their own.
Logic and memory chip manufacturing	The United States is the inventor and developer of the micro chip. Capitalistic societies are the manufactures of advanced chip technology such as Taiwan and South Korea.	Socialistic societies such as China and Russia cannot copy todays advanced micro chips. Socialism and its controls prevent society from acquiring skills needed to copy this technology.
Satellite internet service	Space-X, a private company, is putting thousands of satellites in low orbit for international internet service available anyplace in the world.	Russia has been developing satellite destroying technology should it need it. It can destroy one satellite at a time. It has no defense or control over Space-X 10,000 satellite system. Russa cannot put up a system of its own like this.
Artificial intelligence	Capitalistic societies is developing artificial intelligence to help man do work.	Socialistic societies is using artificial intelligence to control its citizens.
Theme	Service	Control

Capitalism

God inspires visionary concepts to man that have freedom to receive them

God creates intelligence.

God creates the universe.

God creates the electromagnetic spectrum with radio waves.

God creates life.

With God's help, Nikola Tesla discovered the radio waves.

With God's help, Guglielmo Marconi discovered how to use radio waves for communication.

Today we have the cellphone.

God chooses visionary leadership before they are born. They are called prodigy children or prodigy adults. They have a direct connection to divine intelligence.

Creating wealth for the people is prosperity.

Socialism

More money solves all problems???

Government controls produce efficiency and quality of life???

Decisions are based on diversity, equity, inclusion and accessibility (DEIA)

Visionary concepts is a dead horse, social circles will not let them develop.

New technology is copied from capitalistic society.

Opportunity is offered to individuals, or groups based on loyalty to political leaders.

Today we have socialistic states, China, Russia, and more; they are seeking ways to declare war on someone.

Creating wealth for the elite is prosperity.

Nashville, Tennessee, America's City of Opportunity

Nashville, Tennessee, USA is the home of country music where people with music talent and big dreams go hoping their talent will be discovered. Nashville started with a radio station where local artist would perform live. Becoming aware that live talent is not dependable for radio broadcasting a visionary established a record recording company. The broadcast of recorded music created a demand for the records and these startup visionaries became wealthy. This success attracted more talented musicians and songwriters. Soon theaters were established that supported the radio station and music artist. Nashville became known as the city for opportunity because thousands became famous and wealthy. Today on a street called Broadway there are several blocks of storefronts each blasting out music by artist hoping to be discovered. This is where talent scouts come looking for new talent.

Live broadcast every Saturday night from The Grand Ole Opry inspired dreamers and visionaries from all around the world. They came to Nashville seeking opportunity to fulfill their dream. With a huge group of dreamers new possibilities became reality. Consider the Gaylord Opryland Resort. They have 2,000 rooms, many overlooking a 4.5 acre Delta Atrium that is a tropical jungle that includes a Delta riverboat cruise, restaurants, and a small village. Developing an operation like this took thousands of dreamers and visionaries. The Grand Ole Opry attracted the talent that made this possible.

Our unique talent comes from God at birth. God will help us acquire the needed opportunity if we recognize His help or not. God is in the education business and He does not require preconditions, only our persistence and follow where opportunity leads.

My source for this is prodigy children who have direct contact with universal intelligence that was created by God. There is no other way to explain their professional skills at an early age.

Some cannot attend school because they know more than teachers.

Gaylord Opryland Resort has a 4,5 acre Delta Atrium. They have 2,000 rooms, many overlooking the Atrium .

The Invisible Universe

Most of the universe is invisible to man. This is God's domain that has hundreds, if not thousands of invisible energy waves, many have yet to be discovered. Discovery is based on God's time and person to revile selected elements, He is in control. All invisible elements has been a powerful benefit to man.

- God is interactive in everyone's life. Quality of life increases when we follow His laws. God is not prejudice, man is.
- Divine intelligence penetrates the universe like radio waves, we just need to tune-in for desired information. The ability to recognize intuitive inspiration is the key.
- Gravity is like a windup clock, it maintains order in the universe.
- Radio waves are all around us all the time with loads of information. We need a mechanical device for a connection.
- Microwaves are an extension of radio waves used for radar and cooking.
